

Automated Metering Infrastructure

The City of Brenham opened the doors to advanced metering by installing an Automated Metering Infrastructure (AMI) system across the city. This system provides advanced metering options to all city owned water, electric, and gas utilities. The system allows the city's billing department and its customers to gain precise, accurate information about each individual meter in the field. Each meter is read on 1 hour intervals and provides a detailed history on each meter. There are many benefits that both the city of Brenham and its customers will receive from this new technology. Benefits include:

City of Brenham Benefits:

Automatic Meter Readings (No Personnel)
Power Outage Detection
Meter Tampering Detection
Leak Detection
Detailed Usage History

Customer Benefits:

No more meter reader visits
Detailed Usage History upon Request
Leak Detection Alerts

Installation was completed in January 2015 converting over 18,000 meters to AMI.
